Diploma Thesis Title: The Somatotype Characteristics of Professional Ballet
Dancers

Department: Department of Kinantropology and Humanities

Supervisor: Doc. PhDr. Jitka Chytráčková, Csc.

The year of submission: 2010

Contents

Objectives of the thesis: The objective of diploma thesis is the evaluation of professional ballet dancers' somatotype who are employed in National Theatre in Prague and it's comparison with the standards of Czech population. Then we compare the acquired data with typological characteristic of ballet dancers in the world and with somatotype of FTVS UK students in Prague.

Used methods: somatometrical measurement

Results: The aggregate of National Theater dancers is homogenous. The average somatotype of the investigated aggregate is similar to the average ballet dancers' somatotype in the world and different in comparison with FTVS students and Czech population.

Keywords: somatotype, measurement, ballet, anthropometry
